Introduction

This update implements the following:

- IOC v 11.2 update
- Clements 2021 Update
- Corrections to distribution and distribution texts.

New

In species distribution, extinct species are separable from species of uncertain or historic occurrence. In previous versions this was not possible. This change allows the exclusion of extinct species from Species Checklists and the results of queries such as “Where To Go”.

This species update requires version 4.1.140 or later of Wildlife Recorder 4. This update is not compatible with Wildlife Recorder 3.

Taxonomy Support

Important notice for users of Howard and Moore and HBW taxonomies.

It has been some years since the publication of Howard and Moore and there seems to be no sign that a new version will appear. We will no longer be updating the HM taxonomy in future versions of the database. You may continue to use your existing version of H&M taxonomy, but it will no longer be updated.

Since the HBW databases have been taken over by Cornell (eBird) and will use the Clements/eBird taxonomy, we will no longer be updating the HBW taxonomy. You may continue to use your existing version of the HBW taxonomy, but it will no longer be updated.

Not specifically identified sightings

Please note that “spuhs” e.g. Black-eared Wheatear sp. (*Oenanthe hispanica/melanoleuca*) are no longer by default added to lists. You can add a parameter to your lists which allows the addition of “spuhs” to the list.

Important Note for Nature Lister Users

If you use Nature Lister or WR4M you will need to reload your workspaces to your device(s) after you have applied the species update to your WR4 database. Please undertake the following steps:

1. Export any outstanding trips from Nature Lister and import them into WR4.
2. Backup your WR4 databases.
3. Apply the new species update to your WR4 database.
4. Upload your workspaces from WR4 to the cloud server.
5. Import the new workspaces to your device(s).

Changes to the Bird Species Database in previous versions

A complete list of all the changes contained in each version of the species database can be found in the Wildlife Recorder User Area on our website.

Changes to the Bird Species Database since last update (version 107 January 2021)

Clements Taxonomy Changes

Implemented changes in Clements 2021 update. In addition to the changes noted below there are many species sequence changes in this update. For full details of the Clements changes see the [Clements Checklist website](#)
