## **Introduction**

This is a major update to the mammal taxonomy. The taxonomy now follows the Handbook of the Mammals of the World and the Illustrated Checklist of the Mammals of the World published by Lynx.

In species distribution, extinct species are separable from species of uncertain or historic occurrence. In previous versions this was not possible. This change allows the exclusion of extinct species from Species Checklists and the results of queries such as "Where To Go".

This species update requires version 4.1.140 or later of Wildlife Recorder 4. This update is not compatible with Wildlife Recorder 3.

## **Changes to the species database in previous versions**

A complete list of all the changes contained in each version of the species database can be found in the Wildlife Recorder User Area on our website.
